REDUCING THE ENVIRONMENTAL IMPACT

**HD Supply Utilities can help
you green your operations...**

Increasing federal and state environmental regulation is one of the most critical issues facing electric utilities today. Pressure to reduce or offset carbon emissions, increase renewable energy sources and energy efficiency, implement energy conservation programs and green supply chains is being felt in utilities across North America.

In response, utilities are becoming leaders in environmental stewardship, taking significant steps toward reducing the environmental impact of their operations across transmission and distribution facilities, power generation plants and office buildings. They're also working with suppliers to green their supply chains, while helping customers to reduce their energy usage.

We recognize that you need to take concrete, practical steps toward reducing your utility's carbon footprint. The *ideallygreen for Utilities* program can get you there, with green products and solutions for renewable energy, energy efficiency and energy conservation.

Green Products

HD Supply Utilities' *ideallygreen* program provides a range of utility and MRO products for transmission and distribution, as well as MRO products for power generation. *ideallygreen* will help you reduce energy usage, increase your use of recyclable, biodegradable or environmentally sensitive materials, and lower hazardous waste, VOCs and HAPs. For an easy-to-use, interactive catalog of these products, refer to the HD Supply Utilities Product Guide.

Project Services for Wind Farms

HD Supply Utilities offers one-stop packaging solutions for the construction of wind farms. Within the design and build process, we manage materials packaging – from developing a bill of material to delivery at the job site – for the collection system, substation and transmission lines. We combine utilities engineering capabilities with the most comprehensive supply chain management expertise in the industry.

Let HD Supply Utilities be your partner as you green your operations. For more information, or to request a green product catalog, please contact:

ALWAYS ON THE JOB.

Demand Response and Demand Side Management for Energy Efficiency and Energy Conservation

Our full suite, integrated turnkey solution for demand response and demand side management gives you what you need to offer energy efficiency and energy conservation programs and achieve regulatory compliance. Demand response and demand side management are major components of our Smart Grid Technology Solutions, which comprise 16 core components extending from the Home Area Network to the utility data center. The solution suite includes:

- AMI Installation & Integration
- Demand Response
- Demand Side Management
- SCADA Systems & Communications
- Cyber Security

World Energy

As a certified partner of World Energy Solutions, HD Supply Utilities offers utilities access to the industry's leading online procurement platforms:

WorldEnergy|Exchange® ...an online platform that delivers competitive pricing for retail and wholesale transactions for electricity, natural gas, green power, and other fuels in an efficient, cost-effective, and broadly compliant manner via its auction and post and respond mechanisms.

World|GreenExchange® ...an open and liquid online marketplace that brings efficiency, transparency and high-volume transactional capabilities to the buying and selling of all types of environmental commodities, helping utilities reach their RPS requirements and fulfill their voluntary programs.
